

Lenel OnGuard/ViconNet Access Control Solution

- Supplement your Access Control system with the ViconNet Video Forensics
- Video windows pop up in response to an access event
- Respond to video loss and video motion detection alarms
- ViconNet provides a true video surveillance system with capabilities such as: logical camera grouping, email or text alerts, flexible fps settings, web browser plug-in and the Virtual Matrix Controller
- Live camera view on demand
- Fully scalable

Vicon® Industries Inc. and Lenel Systems International have joined forces to create a powerful, integrated Access Control and Video Surveillance system that combines the two technologies for a complete security solution. By adding ViconNet® to an existing or planned Lenel OnGuard® Access Control system, all of the power of the ViconNet application is available from within the OnGuard application. ViconNet has been fully certified to work with OnGuard under Lenel's OpenAccess™ Alliance Program.

ViconNet and OnGuard share the same network and all communication between the two systems takes place on the network. The integration module processes the event triggers from the OnGuard system, which

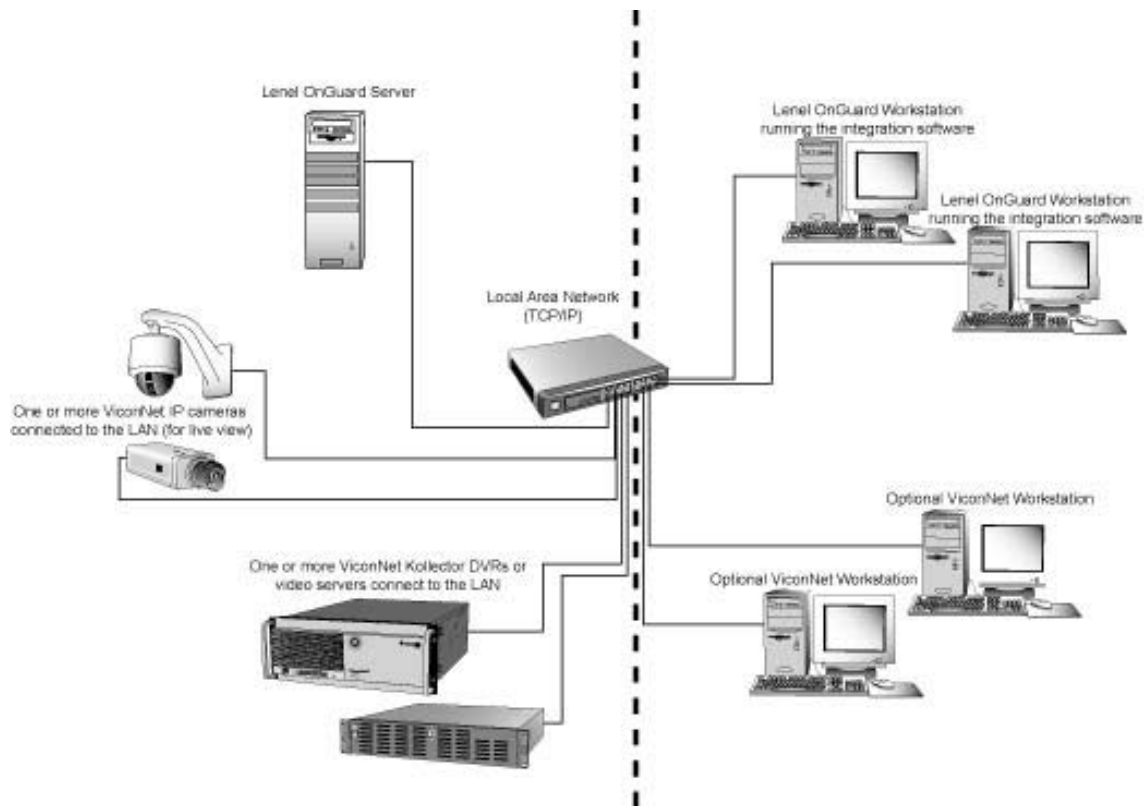

are then utilized by ViconNet, to provide the video stream. When an access control event or action occurs that has been defined as video related, video forensics are provided as well as the event log to present a complete record of what occurred and when it occurred.

In a typical installation, this will all take place within the OnGuard application. The user does not need to have the ViconNet application running or access it to play, record or search video. However, if the user wants to take advantage of all of the powerful functionality offered by ViconNet, the complete application can be run and accessed on a parallel system.

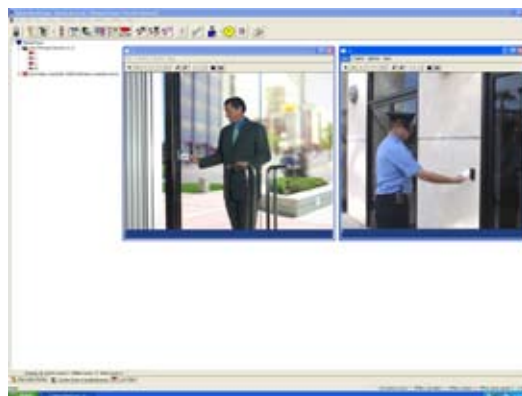

Note: Test was done using OnGuard 6.4.500 with a Collector Strike running ViconNet version 6.0c; other ViconNet version 6.x-based devices will work. I-Onyx and 3rd party cameras, SurveyorHD camera domes and the H.264-ENCDR are not supported.

The ViconNet system is completely integrated with the Lenel OnGuard Video Viewer, Alarm Monitoring and Map Designer modules and provides the following functionality:

- Display live video from any cameras connected to the ViconNet system in any order
- Play back recorded video for several cameras simultaneously with full playback control (play, stop, pause, rewind, fast forward, frame by frame)
- Display video from a specific area
- Display video from several areas
- Receive and log video loss and motion detection from the ViconNet system
- Monitor video to follow up on alarm
- Launch guard tours
- Play back video for specific cameras
- Provide graphical map of the access control and camera location
- Allow the operator to call up video from the map
